

Idempotents in the integral group ring
 (Notes, University of Richmond, 2005-2006)
 Jim Davis, Ken Smith

April 16, 2007

Contents

1	Motivation for group theory in combinatorics	7
1.1	A Fundamental Example	7
1.2	Difference Sets	8
1.3	The combinatorial motivation for using group theory	9
1.4	Cayley Graphs	11
1.5	Summary	11
2	Group Rings	12
2.1	Motivation for introducing group rings	12
2.2	The group ring $R[G]$	12
2.2.1	An inner product on $R[G]$	13
2.2.2	Subsets as group ring elements	14
2.2.3	Equivalence of group ring elements	14
2.3	Homomorphic Images of G	14
2.3.1	The canonical lift of a homomorphic image	15
2.4	On idempotents	15
2.4.1	Integral bases for $\mathbb{Z}[G]$	16
2.5	Difference sets, from the group ring point of view	18
2.6	Equations In A Group	19
2.6.1	Distance Regular Graphs	19
2.6.2	Difference Sets, Relative Difference Sets, Perfect Ternary Arrays	20
2.6.3	Packings and Coverings in Groups	21
2.6.4	Matrices with constant line sum	21
2.6.5	Factoring Groups and other projects	22
2.6.6	Research projects	22
2.6.7	Summary	23
3	Group Characters and Their Idempotents	24
3.1	Basic facts about representations	24
3.1.1	The Fourier transform	25
3.2	The idempotent associated with a character	25
3.2.1	Aliases	26
3.2.2	An equivalence relation on characters	27
3.3	Galois theory and characters	27
3.4	Nonabelian Groups	28
3.5	Some Examples	29

4	Basic algebraic number theory results	30
4.1	Some factoring results	30
4.1.1	Factoring in cyclotomic rings	31
4.1.2	Division in $\mathbb{Z}[G]$ and valuations in $\mathbb{Z}[\zeta_m]$	32
4.2	The critical equation $\delta\bar{\delta} = n$	32
4.3	Constructing difference sets from idempotents	32
4.4	Schmidt's result	34
4.5	Canonical aliases for $X \in \mathbb{Z}[G]$	35
4.5.1	The lift of a homomorphic image	35
4.5.2	The canonical lift of an algebraic integer	35
4.6	Examples	37
4.6.1	Factoring 2	37
4.6.2	Factoring 3	37
4.6.3	Factoring 5	37
4.6.4	Factoring 11	38
